

## **4. Bright/Dark-Field Optical Characterization (MEL 2214)**

ZEISS Axio Observer is an optical microscopy for material investigations and analyses. Multiple functionalities can be achieved such as surface topography, components and grain sizes analysis, etc.

### **Features:**

- Automated movement stage.
- Objective lens with magnifications of 10X, 20X, 50X, 100X.
- Full computer control.
